Detailed description of project						Type of services provided		
 The irrigation scheme has an area of 62700 stremmata (6270 ha) and is located at the south-eastern part of Peloponnisos, Prefect of Lakonia. The scheme will have positive impacts on the economy of the region and will contribute to the low income of the agricultural population. No major adverse impacts are anticipated during the construction of the scheme upon the flora and the fauna of the region, assuming appropriate practices are employed. Impacts are anticipated on the water quality of the Evrotas river, therefore, an agrochemicals applications plan has to be established. The pond of Asteriou has to be protected, and a management scheme is proposed to protect and further upgraded this biotope, that can become, that can become an important wetland of the major region. The construction of the scheme and the improvement of certain parts of the area are a function of available funds and a function of the attention to be given during both, the construction and the operation of the scheme.
