Detailed description of project						Type of services provided		
 Management plan for the conservation of Potamos Kerkyras Delta wetland and mitigation measures for the rehabilitation of the area surrounding the under construction Biological Treatment Unit of the municipality of Kerkyra. The proposed technical works and management plans included: • Wetland conservation. • Area rehabilitation. • Creation of an artificial wetland, using water deriving from the sewage treatment. The area is environmentally degraded, due to uncontrolled material disposal from construction works and Xalikiopoulos lagoon dredging. The conserved natural wetlands should be protected during the construction of the Biological Treatment Unit and the rehabilitation works of the surrounding area.
