Detailed description of project

The main objective of this study was the localization and evaluation of potential environmental impacts incurred from the construction and operation of the port of Lavrio recreation department (Marines A and B) and the proposal of appropriate mitigation measures and monitoring plan.

In the context of the description of environmental setting of the study area all necessary data (soil type, land cover and land use, biotopes, meteorological data, population census data e.t.c) were collected from field work and on-site recognition and mapping and from literature (cartocraphic database, satellite images, existing studies, etc).

- Environmental Impact Assessment
- Field work and collection of eco-data
- Analysis of the Physical Environment
- · Analysis of the Biological Environment
- Analysis of the Social and Financial Environment
- Demographics
- Mathematical Modelling
- Rehabilitation Measures design and development
- Awareness Raising
- Environmental Legislation
- Integrated management of the region
- Satellite applications
- Communication with relevant stakeholders, institutions and public authorities - Capacity building in environmental protection
